1. Introduction

Status

MESSAGE TYPE : DELFOR
REFERENCE DIRECTORY : D.01B
EANCOM® SUBSET VERSION : 004

Definition

A message from buyer to supplier giving product requirements regarding details for short term delivery instructions and/or medium to long term product/service forecast for planning purposes according to conditions set out in a contract or order. The message can be used to authorise the commitment of labour and materials resources. The message may also be sent by a supplier to a buyer as a response to a previously transmitted delivery schedule.

Principles

The message may be used as a delivery schedule by the buyer to;

- specify delivery schedules requested by the buyer
- define the aspects that guarantee a perfect synchronisation between buyer and supplier
- provide information allowing the supplier to plan for future requirements in order to purchase raw materials to produce and deliver goods in the most economical way.

The message may be used as a delivery schedule response by the supplier to identify;

- the total acceptance
- total rejection
- proposal for change.

The Delivery Schedule message may be used in two ways :

- Location driven - a delivery location (or locations) may be provided with multiple products and delivery quantities for the location (or locations) identified.
- Product driven - a product (or products) and quantities may be identified with multiple delivery locations for the product (or products).

In EANCOM® it is recommended that only one approach be adopted with each trading partner at one time.

The approach selected must be indicated by means of the relevant codes in data element 1001 in the BGM segment and in data element 7365 in the GIS segment.

When using the Delivery Schedule message to provide a response the message sender may indicate three types of information;

- **The total acceptance of a previous Delivery Schedule message.** In this instance only mandatory segments and segments identifying the parties and the message being responded need to be transmitted (UNH, BGM, RFF-DTM, NAD, and UNT). The acceptance of the message is indicated using data element 1225 (code value '29, Accepted without amendment' in the BGM segment).
- **The total rejection of a previous Delivery Schedule message.** In this instance only mandatory segments and segments identifying the parties and the message being responded need to be transmitted (UNH, BGM, RFF-DTM, NAD, and UNT). The rejection of the message is indicated using data element 1225 (code value '27, Not accepted' in the BGM segment).
- **The proposed change of information at individual product level.** Where a change or changes to a product takes place all of the information related to the product must be re-transmitted for confirmation purposes e.g. all segments at LIN level. Data element 1225 in the BGM segment must be set to '4,

1. Introduction

Change'. At product level data element 1229 in the LIN segment must be set to '3, Change'. Reference to a specific line being responded to is achieved through the use of a combination of the reference to the original document and in the RFF at detail level using DE 1156 'Line number'. The FTX segment at LIN level may be used to provide an explanation, either in coded or free form, as to why the information is being changed.

Information at LIN level not re-transmitted is automatically accepted by default. For example, from an original Delivery Schedule containing ten products, four need to be changed. Only the data related to these four products must be re-transmitted and the other six products are accepted by default.

Accepted information at product level may also be explicitly indicated using the code value '5, Accepted without amendment', in data element 1229 in the LIN segment.

2. Message Structure Chart

Delivery Schedule Heading Section

UNH	1	M	1	- Message header
BGM	2	M	1	- Beginning of message
DTM	3	M	10	- Date/time/period
FTX	+	4	C 5	- Free text

4. Segments Description

Delivery Schedule Heading Section

- UNH - M 1 - Message header
This segment is used to head, identify and specify a message.
- BGM - M 1 - Beginning of message
This segment is used to indicate the type and function of a message and to transmit the identifying number.
- DTM - M 10 - Date/time/period
This segment is used to specify the date of the Delivery Schedule message.
- FTX - C 5 - Free text
This segment is used to specify any free text information relevant to the delivery schedule message.
- SG1 - C 10 - RFF-DTM**
A group of segments giving references relevant to the whole message, e.g. contract number.
- RFF - M 1 - Reference
This segment is used to identify additional references relevant to the whole Delivery Schedule.
- DTM - C 1 - Date/time/period
This segment is used to indicate any dates associated with the references provided in the previous RFF segment.
- SG2 - C 99 - NAD-SG4**
A group of segments identifying names, addresses, locations, and contacts relevant to the whole Delivery Schedule.
- NAD - M 1 - Name and address
This segment is used to indicate the trading parties involved in the Delivery Schedule process. Identification of buyer and supplier is mandatory in the delivery schedule. Additionally, the consignee and invoicee may also be specified if different to the buyer and supplier.
- SG4 - C 5 - CTA-COM**
A group of segments to identify people, functions, or departments and appropriate numbers to whom communication should be directed.
- CTA - M 1 - Contact information
This segment is used to identify department and/or contact names within the party specified in the previous NAD segment.
- COM - C 5 - Communication contact
This segment identifies the communications number, and type of communications, for the department or person identified in the previous CTA segment.

Delivery Schedule Detail Section

- SG6 - C 9999 - GIS-SG7-SG12**
A group of segments providing details on delivery points and products and related information using one of both scheduling methods.
- GIS - M 1 - General indicator
The GIS segment is the trigger segment of the DELFOR details. Either a location driven approach (Segment group 7 and segment group 12) or a product driven approach (Segment group 12 and segment group 22) may follow.
- SG7 - C 1 - NAD-LOC-FTX-SG11**
A group containing delivery names and addresses, related information and details of line items to be consigned to the delivery points.

4. Segments Description

NAD - M 1	- Name and address This segment triggers the location driven delivery schedule. By choosing this approach (specified in GIS segment data element 7365, value 94) the product driven approach is automatically excluded.
LOC - C 10	- Place/location identification A segment identifying a place or a location and/or related locations.
FTX - C 5	- Free text This segment is used to provide free form or coded text information.
SG11 - C 10	- TDT-DTM A group of segments specifying details of the mode and means of transport, and date/time of departure and destination relating to specified delivery point.
TDT - M 1	- Details of transport This segment is used to specify transport details for the delivery schedule. If successive stages of transport need to be identified, then segment group 11 will be repeated for each successive stage, e.g., on-carriage, etc.,
DTM - C 5	- Date/time/period This segment is used to specify dates and times relevant to the previous TDT segment.
SG12 - C 9999	- LIN-PIA-IMD-MEA-LOC-DTM-FTX-SG13-SG17-SG20-SG22 A group of segments providing details of the individual line items for both methods.
LIN - M 1	- Line item This segment is used to identify the product or service for which the schedule or forecast is being provided.
PIA - C 10	- Additional product id This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.
IMD - C 10	- Item description This segment is used to describe the current line item.
MEA - C 5	- Measurements This segment is used to specify the actual physical dimensions of the product being sold in variable lengths or volumes.
LOC - C 999	- Place/location identification
DTM - C 5	- Date/time/period Date/time/period associated with the line item, such as the date of the engineering change.
FTX - C 5	- Free text This segment is used to specify any special requirements for the current line item.
SG13 - C 10	- RFF-DTM A group of segments giving references related to the line item and where necessary, their dates.
RFF - M 1	- Reference This segment is used to provide reference numbers which provide further identification of each line item in the delivery schedule.
DTM - C 1	- Date/time/period This segment is used to indicate any dates associated with the references provided in the previous RFF segment.

4. Segments Description

SG17 - C 999	- SCC-SG18 A group of segments specifying the schedule information for the product identified in the LIN segment. With the delivery point driven method this segment group provides the schedule for the identified delivery point and product. With the product driven method this segment group can be used to summarise all schedules provided with the subsequent delivery point information given in segment group 22.
SCC - M 1	- Scheduling conditions This segment is used to specify the type and status of the schedule being given, and optionally defining a pattern to be established, e.g., firm or proposed delivery schedule for a weekly pattern.
SG18 - C 999	- QTY-DTM A group of segments specifying quantity related information for actual delivery, reporting or cumulative quantities and forecast quantities as required for the line item under the schedule conditions of the previous SCC segment.
QTY - M 1	- Quantity This segment is used to specify quantities related to the current SCC item.
DTM - C 2	- Date/time/period This segment is used to provide dates and times relating to the quantity and schedule details in the SCC/QTY segments. This segment may indicate date/time ranges, e.g., the start and end date for a delivery pattern, etc.
SG20 - C 99	- PAC A group of segments identifying the packaging for goods referenced in the line item to be delivered.
PAC - M 1	- Package This segment is used to provide packaging details for the current line item.
SG22 - C 999	- NAD A group of segments providing details of the individual delivery points for the given product.
NAD - M 1	- Name and address This segment is used to identify the delivery points for the current line item.
UNT - M 1	- Message trailer This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

5. Segments Layout

This section describes each segment used in the EANCOM® Delivery schedule response message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	R	Indicates that the entity is required and must be sent.
- ADVISED	A	Indicates that the entity is advised or recommended.
- DEPENDENT	D	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	O	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	N	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

5. Segments Layout

Segment number: 1

UNH - M 1 - Message header					
Function: To head, identify and specify a message.					
		EDIFACT	GS1	*	Description
0062	Message reference number	M an..14	M		Senders unique message reference. Sequence number of messages in the interchange. DE 0062 in the UNT will have the same value. Sender generated.
S009	MESSAGE IDENTIFIER	M	M		
0065	Message type	M an..6	M	*	DELFOR = Delivery schedule message
0052	Message version number	M an..3	M	*	D = Draft version/UN/EDIFACT Directory
0054	Message release number	M an..3	M	*	01B = Release 2001 - B
0051	Controlling agency	M an..2	M	*	UN = UN/CEFACT
0057	Association assigned code	C an..6	R	*	EAN005 = GS1 version control number (GS1 Permanent Code) Indicates that the message is the EANCOM version 004 of the UNSM Delivery Schedule.
0068	Common access reference	C an..35	N		
S010	STATUS OF THE TRANSFER	C	N		
0070	Sequence of transfers	M n..2			
0073	First and last transfer	C a1			
<p>Segment Notes:</p> <p>This segment is used to head, identify and specify a message. DE's 0065, 0052, 0054, and 0051: Indicate that the message is a UNSM Delivery Schedule message based on the D.01B directory under the control of the United Nations.</p> <p>Example: UNH+ME000001+DELFOR:D:01B:UN:EAN004'</p>					

5. Segments Layout

Segment number: 2

BGM - M 1 - Beginning of message					
Function:					
To indicate the type and function of a message and to transmit the identifying number.					
		EDIFACT	GS1	*	Description
C002	DOCUMENT/MESSAGE NAME	C	R		
1001	Document name code	C an..3	R		236 = Delivery forecast 291 = Delivery schedule response 241 = Delivery schedule
1131	Code list identification code	C an..17	N		
3055	Code list responsible agency code	C an..3	N		
1000	Document name	C an..35	O		
C106	DOCUMENT/MESSAGE IDENTIFICATION	C	R		
1004	Document identifier	C an..35	R		Delivery schedule number assigned by the sender. For global unique identification of documents Global Document Type Identifier (GDTI) is available.
1056	Version identifier	C an..9	N		
1060	Revision identifier	C an..6	N		

5. Segments Layout

1225	Message function code	C an..3	R	*	<p>1 = Cancellation 4 = Change 7 = Duplicate 9 = Original 27 = Not accepted 29 = Accepted without amendment 31 = Copy 42 = Confirmation via specific means</p>
<p>The message function, coded is a critical data element in this segment. It applies to all data indicated in the message. Code values 27, and 29 are used only when the message is sent as delivery schedule response. The following definitions apply for the restricted codes:</p> <p>1= Cancellation - A cancellation of a previously sent delivery schedule. The previous delivery schedule number is specified in the RFF segment.</p> <p>4 = Change - A change to a previously sent delivery schedule. Only the area's changing need to be re-transmitted. The previous delivery schedule number is specified in the RFF segment.</p> <p>7 = Duplicate - A re-transmission involving the same parties, on the specific request of the receiver.</p> <p>9 = Original - An original transmission of a delivery schedule.</p> <p>27 = Not accepted - Message to inform that the referenced message is not accepted by the recipient. The previous delivery schedule number is specified in the RFF segment.</p> <p>29 = Accepted without amendment - Referenced message is entirely accepted. The previous delivery schedule number is specified in the RFF segment.</p> <p>31 = Copy - A copy of a delivery schedule for a third party for information purposes.</p>					

5. Segments Layout

Segment number: 2

	EDIFACT	GS1	*	Description
				42 = Confirmation via specific means - A confirmation of a previous delivery schedule sent by means other than EDI, e.g., Fax.
4343 Response type code	C an..3	D	*	AB = Message acknowledgement AC = Acknowledge - with detail and change AI = Acknowledge only changes NA = No acknowledgement needed The data element is used if the delivery schedule issuer wishes to explicitly indicate whether an acknowledgement is required or not.

Segment Notes:

This segment is used to indicate the type and function of a message and to transmit the identifying number.

Example:

BGM+241+LDS562+9'

Delivery schedule number LDS562

BGM+291+PDS416+9'

Delivery schedule response, number PDS416.

5. Segments Layout

Segment number: 3

DTM - M 10 - Date/time/period				
Function: To specify date, and/or time, or period.				
		EDIFACT	GS1	* Description
C507	DATE/TIME/PERIOD	M	M	
2005	Date or time or period function code qualifier	Man..3	M	* 2 = Delivery date/time, requested 61 = Cancel if not delivered by this date 63 = Delivery date/time, latest 64 = Delivery date/time, earliest 69 = Delivery date/time, promised for 137 = Document/message date/time 419 = Forecast period
2380	Date or time or period value	C an..35	R	
2379	Date or time or period format code	C an..3	R	102 = CCYYMMDD 203 = CCYYMMDDHHMM 718 = CCYYMMDD-CCYYMMDD
Segment Notes: This segment is used to specify the date of the Delivery Schedule message. DE 2005: Identification of the 'Document/message date/time' (code value 137) is mandatory in an EANCOM message. Example: DTM+137:20020110:102' DTM+69:200201201230:203' Delivery is promised for 12:30pm on the 20th of January 2002.				

5. Segments Layout

Segment number: 4

FTX - C 5 - Free text					
Function: To provide free form or coded text information.					
		EDIFACT	GS1	*	Description
4451	Text subject code qualifier	M an..3	M		DEL = Delivery information DIN = Delivery instructions ZZZ = Mutually defined
4453	Free text function code	C an..3	O		1 = Text for subsequent use 3 = Text for immediate use
C107	TEXT REFERENCE	C	D		References to a standard text. This composite is only used when trading partners have agreed to use mutually defined code values.
4441	Free text value code	M an..17	M		001 = ...standard text...
1131	Code list identification code	C an..17	O		
3055	Code list responsible agency code	C an..3	D		91 = Assigned by supplier or supplier's agent 92 = Assigned by buyer or buyer's agent
C108	TEXT LITERAL	C	D		This composite is only used if coded text can not be used.
4440	Free text value	M an..512	M		
4440	Free text value	C an..512	O		
4440	Free text value	C an..512	O		
4440	Free text value	C an..512	O		
4440	Free text value	C an..512	O		
3453	Language name code	C an..3	D		ISO 639 two alpha code This data element is only used when non coded free text has been provided in data element C108.
4447	Free text format code	C an..3	N		
Segment Notes:					
<p>This segment is used to specify any free text information relevant to the delivery schedule message. Use of this segment in free form is not recommended since it may inhibit automatic processing of the delivery schedule. Coded references to standard text is an available functionality which enables automatic processing and reduces transmission and processing overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.</p>					
<p>Example: FTX+ZZZ+1+001::92'</p>					

5. Segments Layout

Segment number: 5

SG1	- C	10 - RFF-DTM			
RFF	- M	1 - Reference			
Function:					
To specify a reference.					
		EDIFACT	GS1	*	Description
C506	REFERENCE	M	M		
1153	Reference code qualifier	Man..3	M	*	AAN = Delivery schedule number BO = Blanket order number CR = Customer reference number CT = Contract number IP = Import licence number ON = Order number (buyer) PD = Promotion deal number VN = Order number (supplier) Code value AAN is used in combination with any of the following codes of DE 1225 in the BGM segment 1, 4, 27, 29.
1154	Reference identifier	C an..70	R		
1156	Document line identifier	C an..6	N		
4000	Reference version identifier	C an..35	N		
1060	Revision identifier	C an..6	N		
Segment Notes:					
This segment is used to identify additional references relevant to the whole Delivery Schedule.					
Example:					
RFF+CT:563288'					

5. Segments Layout

Segment number: 6

SG1	- C	10 - RFF-DTM			
DTM	- C	1 - Date/time/period			
Function:					
To specify date, and/or time, or period.					
		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	Man..3	M	*	36 = Expiry date 171 = Reference date/time 194 = Start date/time 206 = End date/time 321 = Promotion date/period
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 203 = CCYYMMDDHHMM 718 = CCYYMMDD-CCYYMMDD
Segment Notes:					
This segment is used to indicate any dates associated with the references provided in the previous RFF segment.					
Example:					
DTM+171:20020115:102'					

5. Segments Layout

Segment number: 7

SG2	- C	99 - NAD-SG4			
NAD	- M	1 - Name and address			
Function:					
To specify the name/address and their related function, either by C082 only and/or unstructured by C058 or structured by C080 thru 3207.					
		EDIFACT	GS1	*	Description
3035	Party function code qualifier	M an..3	M		BY = Buyer CN = Consignee FW = Freight forwarder IV = Invoicee SU = Supplier WH = Warehouse keeper
C082	PARTY IDENTIFICATION DETAILS	C	A		
3039	Party identifier	M an..35	M		GLN - Format n13
1131	Code list identification code	C an..17	N		
3055	Code list responsible agency code	C an..3	R	*	9 = GS1
C058	NAME AND ADDRESS	C	O		This composite may only be used to fulfill the requirements of directive 2003/58/EC, article 4.
3124	Name and address description	M an..35	M		
3124	Name and address description	C an..35	O		
3124	Name and address description	C an..35	O		
3124	Name and address description	C an..35	O		
3124	Name and address description	C an..35	O		
C080	PARTY NAME	C	D		
3036	Party name	M an..35	M		Party Name, clear text
3036	Party name	C an..35	O		
3036	Party name	C an..35	O		
3036	Party name	C an..35	O		
3036	Party name	C an..35	O		
3045	Party name format code	C an..3	O		
C059	STREET	C	D		
3042	Street and number or post office box identifier	M an..35	M		Building Name/Number and Street name
3042	Street and number or post office box identifier	C an..35	O		
3042	Street and number or post office box identifier	C an..35	O		
3042	Street and number or post office box identifier	C an..35	O		
3164	City name	C an..35	D		City/Town name, clear text
C819	COUNTRY SUB-ENTITY DETAILS	C	D		
3229	Country sub-entity name code	C an..9	O		

5. Segments Layout

Segment number: 7

		EDIFACT	GS1	*	Description
1131	Code list identification code	C an..17	O		
3055	Code list responsible agency code	C an..3	O		
3228	Country sub-entity name	C an..70	O		County/State, clear text.
3251	Postal identification code	C an..17	D		Postal Code
3207	Country name code	C an..3	D		ISO 3166 two alpha

Segment Notes:

This segment is used to indicate the trading parties involved in the Delivery Schedule process. Identification of buyer and supplier is mandatory in the delivery schedule. Additionally, the consignee and invoicee may also be specified if different to the buyer and supplier.

Example:

NAD+BY+5412345000013::9'
 NAD+SU+401234500004::9'
 NAD+CN+5412345600015::9'

Dependency Notes:

The following composites and data elements are only used when a coded name and address can not be used.

The affected composites and data elements are as follows:

C080 - C059 - 3164 - C819 - 3251 - 3207

5. Segments Layout

Segment number: 8

SG2	- C	99 - NAD-SG4
SG4	- C	5 - CTA-COM
CTA	- M	1 - Contact information

Function:
 To identify a person or a department to whom communication should be directed.

	EDIFACT	GS1	*	Description
3139 Contact function code	C an..3	R		IC = Information contact OC = Order contact PD = Purchasing contact
C056 DEPARTMENT OR EMPLOYEE DETAILS	C	O		
3413 Department or employee name code	C an..17	O		
3412 Department or employee name	C an..35	O		

Segment Notes:
 This segment is used to identify department and/or contact names within the party specified in the previous NAD segment.
 The GLN is particularly suitable for this purpose.

Example:
 CTA+IC+SUPPLY DEPARTMENT:D REES'

5. Segments Layout

Segment number: 9

SG2	- C	99 - NAD-SG4
SG4	- C	5 - CTA-COM
COM	- C	5 - Communication contact
Function:		
To identify a communication number of a department or a person to whom communication should be directed.		
	EDIFACT	GS1 * Description
C076	COMMUNICATION CONTACT	M M
3148	Communication address identifier	Man..512 M
3155	Communication address code qualifier	Man..3 M
EM = Electronic mail TE = Telephone AO = Uniform Resource Location (URL)		
Segment Notes:		
This segment identifies the communications number, and type of communications, for the department or person identified in the previous CTA segment.		
Example:		
COM+0033185626232:FX'		

5. Segments Layout

Segment number: 10

SG6	- C	9999 - GIS-SG7-SG12			
GIS	- M	1 - General indicator			
<p>Function: To transmit a processing indicator.</p> <p>Notes: 1. This segment will be removed effective with directory D.02B.</p>					
		EDIFACT	GS1	*	Description
C529	PROCESSING INDICATOR	M	M		
7365	Processing indicator description code	Man..3	M	*	94 = Delivery point driven scheduling method 95 = Product driven scheduling method
1131	Code list identification code	C an..17	N		
3055	Code list responsible agency code	C an..3	N		
7187	Process type description code	C an..17	N		
<p>Segment Notes:</p> <p>The GIS segment is the trigger segment of the DELFOR details. Either a location driven approach (Segment group 7 and segment group 12) or a product driven approach (Segment group 12 and segment group 22) may follow.</p> <p>Example: GIS+95' The DELFOR message is product driven. GIS+94' Location driven delivery schedule.</p>					

5. Segments Layout

Segment number: 11

SG6	- C	9999 - GIS-SG7-SG12			
SG7	- C	1 - NAD-LOC-FTX-SG11			
NAD	- M	1 - Name and address			
Function:					
To specify the name/address and their related function, either by C082 only and/or unstructured by C058 or structured by C080 thru 3207.					
	EDIFACT	GS1	*	Description	
3035	Party function code qualifier	M an..3	M	*	BY = Buyer DP = Delivery party
C082	PARTY IDENTIFICATION DETAILS	C	A		
3039	Party identifier	Man..35	M		GLN - Format n13

Segment number: 11

	EDIFACT	GS1	*	Description
code				
3228 Country sub-entity name	C an..70	O		County/State, clear text.
3251 Postal identification code	C an..17	D		Postal Code
3207 Country name code	C an..3	D		ISO 3166 two alpha code

Segment Notes:

This segment triggers the location driven delivery schedule. By choosing this approach (specified in GIS segment data element 7365, value 94) the product driven approach is automatically excluded.

Please refer to the notes in the message principles section for more information on the rules regarding the two approaches.

This NAD segment is used to identify the delivery points for a location driven delivery schedule. The delivery address given at this point in the message is valid for all following products which are identified in the LIN-PIA segments.

Example:

NAD+DP+5412345000013::9'

Dependency Notes:

The following composites and data elements are only used when a coded name and address can not be used.

The affected composites and data elements are as follows:

C080 - C059 - 3164 - C819 - 3251 - 3207

8213	Transport means identification name identifier	C an..9	N		
			N		

5. Segments Layout

Segment number: 14

	EDIFACT	GS1	*	Description
1131 Code list identification code	C an..17			
3055 Code list responsible agency code	C an..3	N		
8212 Transport means identification name	C an..35	R		Vehicle licence plate/Aircraft number
8453 Transport means nationality code	C an..3	O		ISO 3166 two alpha code
8281 Transport means ownership indicator code	C an..3	N		

Segment Notes:

This segment is used to specify transport details for the delivery schedule. If successive stages of transport need to be identified, then segment group 11 will be repeated for each successive stage, e.g., on-carriage, etc.,

Example:

TDT+20++30+31'

Main carriage transport by road using a truck.

TDT+20+TD03233+30+31+:::SWIFT FREIGHT FORWARDERS+++:::CX146EU:NL'

The main carriage transport is by road using a truck from the carrier Swift Freight Forwarders. The reference number covering the transport is TD03233 and the licence plate number of the truck is CX146EU, a Dutch licence plate number.

Dependency Notes:

Data elements 8179 and 8178 are only used when the type of transport must be specifically identified, that is, a generic description such as road transport is unsuitable.

5. Segments Layout

Segment number: 15

SG6	- C	9999 - GIS-SG7-SG12
SG7	- C	1 - NAD-LOC-FTX-SG11
SG11	- C	10 - TDT-DTM
DTM	- C	5 - Date/time/period

Function:
 To specify date, and/or time, or period.

	EDIFACT	GS1	*	Description	
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	Man..3	M	*	2 = Delivery date/time, requested 63 = Delivery date/time, latest 64 = Delivery date/time, earliest 69 = Delivery date/time, promised for
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 203 = CCYYMMDDHHMM 718 = CCYYMMDD-CCYYMMDD

Segment Notes:
 This segment is used to specify dates and times relevant to the previous TDT segment.

Example:
 DTM+63:200201211430:203'

5. Segments Layout

Segment number: 16

SG6	- C	9999 - GIS-SG7-SG12		
SG12	- C	9999 - LIN-PIA-IMD-MEA-LOC-DTM-FTX-SG13-SG17-SG20-SG22		
LIN	- M	1 - Line item		
Function:				
To identify a line item and configuration.				
	EDIFACT	GS1	*	Description
1082	Line item identifier	C an..6	R	Application generated number of the count of the lines in the delivery schedule.
1229	Action request/notification description code	C an..3	O	3 = Changed 4 = No action 5 = Accepted without amendment 6 = Accepted with amendment 7 = Not accepted
C212	ITEM NUMBER IDENTIFICATION	C	D	This composite will only be used for the identification of GS1 codes. If another coding structure is required, e.g., HIBC, this composite will not be used and the code will be detailed in the PIA segment.
7140	Item identifier	C an..35	R	Format n..14 GTIN - this is the number of the article scheduled for delivery.
7143	Item type identification code	C an..3	R	* SRV = GS1 Global Trade Item Number
1131	Code list identification code	C an..17	N	
3055	Code list responsible agency code	C an..3	N	
C829	SUB-LINE INFORMATION	C	D	
5495	Sub-line indicator code	C an..3	R	* 1 = Sub-line information
1082	Line item identifier	C an..6	R	
1222	Configuration level number	C n..2	N	
7083	Configuration operation code	C an..3	N	
Segment Notes:				
This segment is used to identify the product or service for which the schedule or forecast is being provided. If Global Trade Item Numbers are available it is mandatory to use GTIN within the LIN segment.				
Dependency Notes:				
C829 is only used when sub-lines are required.				
FOR A COMPLETE DESCRIPTION ON THE USAGE OF SUB-LINES PLEASE REFER TO PART I, SECTION 4.10.				
Example:				
LIN+1++541234511115:SRV'				

5. Segments Layout

Segment number: 17

SG6	- C	9999 - GIS-SG7-SG12			
SG12	- C	9999 - LIN-PIA-IMD-MEA-LOC-DTM-FTX-SG13-SG17-SG20-SG22			
PIA	- C	10 - Additional product id			
Function:					
To specify additional or substitutional item identification codes.					
	EDIFACT	GS1	*	Description	
4347	Product identifier code qualifier	M an..3	M	*	<p>1 = Additional identification 2 = Identification for potential substitution 5 = Product identification X1 = No substitution accepted (GS1 Temporary Code)</p> <p>Product Id function qualifier has the following restricted coded values: 1 - Additional Identification - To provide an additional identity for the product identified in the LIN segment. The additional identification can consist of : A supplemental identification which provides more information complementary to the main article number provided in the LIN segment, e.g., a batch number, promotional variant number, product group number, etc. An alternative identification which may be used instead of the main article number provided in the LIN segment, e.g., a buyers article number, an HIBC code, etc., 2 - Identification for substitution - To provide the article number of a product which can substitute the product identified by the article number provided in the LIN segment when the latter is temporarily unavailable, e.g., a similar or identical product coded with a different GTIN (article coded in a different country), a different size unit of the same product, a similar product with for example a different brand name. 5 - Product Identification - To provide the primary product identification code when no GTIN has been provided in the LIN segment. X1 - No substitution accepted - The buyer will not accept any other product code than the one specified in the LIN segment. The code specified in the LIN segment is repeated in the PIA segment to confirm the only code acceptable.</p>

3055	Code list responsible agency code	C an..3	D		

5. Segments Layout

Segment Notes:

This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.

Example:

PIA+1+TC56332:IN'

In this example the PIA segment is used to provide an additional identification to the article number provided in the LIN segment. The GTIN 541234511115 provided in the LIN segment refers to the internal buyer's part number TC56332.

PIA+2+4000862141664:SRV'

In this example the PIA segment is used to provide an article number identification for substitution. The product identified in the LIN segment by the GTIN 541234511115 can be substituted by the product identified in the PIA segment by the GTIN 4000862141664 in case the former is not available.

PIA+5+2209953C001L:AC'

This example details the HIBC code 2209953C001L which is provided as the primary product code because no

5. Segments Layout

Segment number: 17

GTIN was provided in the LIN segment.

PIA+X1+541234511115:SRV'

This example details the situation where the buyer explicitly specifies that no other product is acceptable but the one specified in the LIN segment. The PIA re-specifies the product code from the LIN segment.

5. Segments Layout

Segment number: 18

SG6	- C	9999 - GIS-SG7-SG12			
SG12	- C	9999 - LIN-PIA-IMD-MEA-LOC-DTM-FTX-SG13-SG17-SG20-SG22			
IMD	- C	10 - Item description			
Function:					
To describe an item in either an industry or free format.					
	EDIFACT	GS1	*	Description	
7077	Description format code	C an..3	R	*	C = Code (from industry code list) F = Free-form S = Structured (from industry code list) B = Code and text

Example of a Location Driven Delivery Schedule

The following is an example of a location driven delivery schedule message. The message is sent by the buyer identified by GLN 5412345000013 to a supplier identified by GLN 4012345500004. The date of the message is the 10th of January 2002

The delivery is requested for the 20th of January 2002 at 12:30pm. Delivery is requested for two delivery parties identified with both the delivery parties receiving the deliveries by road using trucks.

The first delivery location is identified by GLN 5412345000013 and requests a delivery of 4000 units of the product identified by GTIN 5412345111115.

The second delivery location is identified by GLN 5412345000020. The product for delivery is identified by GTIN 5412345123453 and is requesting 8800 units of the product.
