## 1. Introduction

---

### Status

MESSAGE TYPE : INVRPT  
REFERENCE DIRECTORY : D.01B  
EANCOM® SUBSET VERSION : 007

### Definition

A message specifying information related to held inventories and planned or targeted inventories. The Inventory Report message is intended to be used in either direction between trading partners.

### Principles

The exchanged information will relate to inventories of raw materials, manufactured articles, returnable containers which are EAN.UCC coded and which can be exchanged or returned, or other inventoriable goods.

The information can be exchanged between a manufacturer and a distributor (wholesaler), manufacturer and consignment holder, retailer to wholesaler, headquarters or service provider, etc.

The message includes functionality to differentiate classes of inventory, and to permit financial valuation of inventories.

The specified quantities relating to held product can indicate opening stock, actual stock, quality control held stocks, damaged stock, and goods movement (receipts or withdrawals) of held inventory, for a given time frame.

The specified quantities may also relate to planned or targeted inventories and can indicate model or target stock, minimum stock, maximum stock and reordering point stock levels.

The specified quantities can relate directly to a product or package, and may be sub-detailed within different groups or classes, e.g. batch, location, age, etc.

For every specified quantity it is possible to indicate status information (events which have happened and the reasons for the events), and the relative package identifications of the physical units involved.

### Structure of the Inventory Report Message

The EANCOM® Inventory Report message may have two basic structures, a simple and an extended, depending if the stock report covers one stock-holding location or multiple locations.

Specific stock attributes such as batch numbers, production or sell by dates and shipping container information may be provided in both structures.

The tables below summarise the possible functionalities within the simple and extended Inventory Report messages, with the principal segments used in each case.

(see [Table 1](#) and [Table 2](#))

The functionalities described in the simple and extended Inventory Report tables are not necessarily mutually exclusive. Segments marked as "Not used" are not needed to cover the functionality described but may be needed when combining two or more of the functionalities outlined.

For example, it is possible to have a simple Inventory Report providing the total stock of a product within a location, and dividing the total stock quantity into sub-quantities by production date. Additionally, the serialised pallets carrying the stock may be identified together with a pallet minimum durability date.

### Identification of Individual Shipping Containers

#### The EAN.UCC Serial Shipping Container Code

The Serial Shipping Container Code (abbreviated SSCC) is an EAN.UCC standard designed to identify uniquely individual transport packages. It enables merchandise that is packed differently from one transport package to

## 1. Introduction

---

another, for example where products are picked and packed to meet individual orders, to be identified. The standard can support operations such as despatch, distribution and receiving of non-standardised packages.

The general code structure is:

```
P   MMMMMMM SSSSSSSS   C  
1  <-----7-----><-----9----->   1
```

where

P = Packaging indicator  
M..M = EAN.UCC prefix/company number  
S..S = Serial number assigned by the company  
C = Data check digit

The Serial Shipping Container Code may be bar coded, enabling automatic data capture, using the Application Identifier 00 and the UCC/EAN-128 bar code symbology. For further information please refer to the UCC/EAN Application Identifier Standard.

1. Introduction

**Table 1**

<b>SIMPLE INVENTORY REPORT: Stock report covering one location for one or more products.</b>						
FUNCTIONALITIES:	PRINCIPAL SEGMENTS USED					
	HEADER SECTION		DETAIL SECTION			
	NAD	CUX-DTM	LIN	QTY and PRI	GIN-LOC-DTM-RFF	CPS-PAC-GIN-DTM
1. Total stock per product within location.	Identifies sender and receiver of message. Identifies stock reporting location if different from message sender. Locations identified by GLN.	Not used.	Identifies GTIN. One LIN repetition per product.	Both segments used to indicate the stock quantities and the cost or retail price for the product.	Not used.	Not used.
2. Total stock quantity divided in sub-quantities according to specific attributes, e.g. stock sub-quantity from a specific batch/serial numbers or date.	Identifies sender and receiver of message. Identifies stock reporting location if different from message sender. Locations identified by GLN.	Not used.	Identifies GTIN.	Identifies stock totals for the full attribute, e.g. batch, stock sub-quantity for a specific attribute, and the cost or retail price for the product.	Identifies attribute to stock sub-quantity. GIN specifies batch or serial numbers. DTM specifies dates such as production or best before dates.	Not used.
3. Total stock quantity divided in sub-quantities according to shipping container.	Identifies sender and receiver of message. Identifies stock reporting location if different from message sender. Locations identified by GLN.	Not used.	Identifies GTIN.	Identifies stock totals for the full attribute, e.g. shipping container, provides sub-quantity relevant to a type of shipping container or a specific shipping container, and the cost or retail price for the product.	Not used.	PAC identifies the number and type of shipping container. GIN provides the Serial Shipping Container Code. DTM may be used to provide relevant dates per shipping container.

**1. Introduction**

**Table 2**

<b>EXTENDED INVENTORY REPORT: Stock report covering several locations for one or more products.</b>						
FUNCTIONALITIES:	PRINCIPAL SEGMENTS USED					
	HEADER SECTION		DETAIL SECTION			
	NAD	CUX-DTM	LIN	QTY and PRI	GIN-LOC-DTM-RFF	CPS-PAC-GIN-DTM
1. Total stock per product and per location for several locations.	Identifies sender and receiver of message. Locations identified by GLN.	Not used.	Identifies GTIN.	Identifies the total stock quantity of product identified in LIN for the location identified in LOC, the total stock for the product in all locations, and the retail price for the product.	LOC identifies the location where stock is held. Locations identified by GLN. DTM may identify the stock report date if different than date at header level.	Not used.
2. Total stock quantity divided in sub-quantities per location according to specific attributes, e.g. stock sub-quantity from a specific batch/serial numbers or date.	Identifies sender and receiver of message. Locations identified by GLN.	Not used.	Identifies GTIN.	Identifies the stock sub-quantity for a specific attribute within a location, the total stock for the product in all locations, and the retail price for the product.	LOC identifies the location where stock is held. Locations identified by GLN. Identifies attribute to stock sub-quantity within a location. GIN specifies batch or serial numbers. DTM specifies stock report date and other dates such as production or best before dates.	Not used.
3. Total stock quantity divided in sub-quantities per location according to shipping container.	Identifies sender and receiver of message. Locations identified by GLN.	Not used.	Identifies GTIN.	Identifies the stock sub-quantities per location relevant to a type of shipping container or a specific shipping container, the total stock for the product in all locations, and the retail price of the product.	LOC identifies the location where stock is held. DTM may identify the stock report date if different than date at header level.	PAC identifies the number and type of shipping container. GIN provides the Serial Shipping Container Code. DTM may be used to provide relevant dates per shipping container.

## 1. Introduction

---

### Quantity Qualifiers Used in the Inventory Report Message

The graphs below provide a simplified illustration of some of the stock quantities which may be provided in the Inventory Report message as part of a stock management control system. This section does not intend to provide a brief overview of stock management systems which are complex and dependent on a large number of other parameters. The aim is to provide a conceptual definition of some of the stock quantity values which may be transmitted in the Inventory Report message.

The Automatic Stock Replenishment graph illustrates a stock management system controlled by a fixed and constant reordering point somewhere in between fixed and constant maximum and minimum stock levels. Product demand/sales forecasts are relatively stable (assume constant) through time.

The difference between the maximum and minimum stock levels is the safety or buffer stock. If inventory falls below the reordering point, an order may be automatically triggered, followed by delivery.

The difference between the reordering point and the minimum stock level is dependent mainly on the delivery lead time, as well as turnover of the product, price of the product, demand/sales variations and other variables. A margin between the reordering point and the minimum stock level will prevent out-of-stock situations.

The difference between the maximum stock level and the reordering point is dependent mainly on the delivery frequency as well as product turnover, demand/sales variations and other variables.

Stock levels may be reduced by minimising the difference between maximum stock level and the reordering point, e.g. within a Just In Time or Quick Response environment the goal is to deliver product on a "as-needed" basis through frequent deliveries thus eliminating safety stock.

The Sales Forecasted Target Stock graph illustrates a stock management system controlled by a variable model or target stock somewhere in between variable maximum and minimum stock levels. The difference between the maximum and minimum stock levels is the buffer of safety stock held. Product demand is variable in this case and actual sales data (SLSRPT) and sales forecast (SLSFCT) information determine the maximum, minimum and optimum or target stock levels.

## 1. Introduction

---

The goal is to maintain the actual stock level as close as possible to the model or target stock. More frequent deliveries and shorter delivery lead times will allow actual stock levels to match target stock levels more closely.

The reordering point in this case is variable and dependent on the target stock level at any given point in time. The buffer or safety stock can be reduced, i.e. the maximum and minimum stock levels converge closer and closer towards the target stock level, through more accurate sales data and sales forecasting.

Data on actual and target inventories can be used in combination with actual sales data (EANCOM® Sales Data Report - SLSRPT) and sales forecasting data (EANCOM® Sales Forecast - SLSFCT) to maintain stock levels close to the model or target stock level or within an automatic replenishment environment to trigger reordering and delivery.

Accurate inventory and forecasting data will enable manufacturers to better control production requirements and distributors to optimise safety or buffer stock levels taking into account the cost of held inventories and market response.

## 4. Segments Description

---

### Inventory Report Heading Section

- UNH - M 1 - Message header  
This segment is used to head, identify and specify a message.
- BGM - M 1 - Beginning of message  
This segment is used to indicate the type and function of a message and to transmit the identifying number.
- DTM - M 10 - Date/time/period  
This segment is used to specify any dates relevant to the complete Inventory Report.
- SG1 - C 10 - RFF-DTM**  
A group of segments giving references and where necessary, their dates relating to the whole message, e.g., a contract, dispatch advice number, etc.
- RFF - M 1 - Reference  
This segment is used to provide references for the entire message.
- DTM - C 1 - Date/time/period  
This segment is used to specify dates or periods relating to the references given in the previous RFF segment.
- SG2 - C 20 - NAD-SG3-SG4**  
A group of segments identifying names, addresses and locations relevant to the whole message.
- NAD - M 1 - Name and address  
This segment is used to identify the trading partners involved in the Inventory Report message. Identification of the parties exchanging the message is mandatory in EANCOM.
- SG3 - C 99 - RFF**  
A group of segments giving references only relating to the specified party, rather than the whole message.
- RFF - M 1 - Reference  
This segment is used to specify any references related to the party identified in the previous NAD segment.
- SG4 - C 10 - CTA-COM**  
A group of segments to identify person, function, department, and where appropriate numbers to which the communications should be directed.
- CTA - M 1 - Contact information  
This segment is used to identify the contact name or department within the party specified in the NAD segment.
- COM - C 5 - Communication contact  
This segment identifies the communications number, and type of communications, for the person or department identified in the preceding CTA segment.
- SG5 - C 5 - CUX-DTM**  
A group of segments to indicate currencies used for financial evaluation.
- CUX - M 1 - Currencies  
This segment is used to specify the currencies in which prices in the Inventory Report are quoted.
- DTM - C 1 - Date/time/period  
This segment is used to specify any dates related to the previous CUX segment.

### Inventory Report Detail Section

#### 4. Segments Description

---

<b>SG9</b>	- C	9999999	- <b>LIN-PIA-IMD-ALI-SG11</b>
			A group of segments providing detailed information on each line of the inventory report.
LIN	- M	1	- Line item
			This segment is used to identify a specific line item in the inventory report.
PIA	- C	10	- Additional product id
			This segment is used to specify additional item identification codes such as a buyer's or supplier's item number.
IMD	- C	10	- Item description
			This segment is used to describe the current line item.
ALI	- C	10	- Additional information
			This segment is used to specify any additional information related to the current line item.
<b>SG11</b>	- C	9999	- <b>INV-QTY-GIN-LOC-DTM-STS-SG12-SG13-SG14-SG15</b>
			A group of segments providing a quantity with all inventory management related information and optionally packaged details, line item currencies and references.
INV	- M	1	- Inventory management related details
			This segment is used to identify the inventory movement direction.
QTY	- M	1	- Quantity
			This segment is used to express the quantities related to the current line item.
GIN	- C	9999	- Goods identity number
			This segment is used to provide additional identification numbers relevant to the line item identified in the LIN segment and specific to the quantities reported in the QTY segment.
LOC	- C	5	- Place/location identification
			This segment is used to identify the location of inventoried goods or the delivery location specific to the quantity reported in the QTY segment.
DTM	- C	5	- Date/time/period
			This segment is used to specify dates relevant to the quantity (or sub-quantity) specified in the QTY segment for the current line item.
STS	- C	9	- Status
			This segment is used to provide status information related to the current line item.
<b>SG12</b>	- C	5	- <b>NAD</b>
			A segment group to identify the owner of the inventory.
NAD	- M	1	- Name and address
			To specify the name/address and their related function, either by CO82 only and/or structured by CO80 thru 3207.
<b>SG13</b>	- C	5	- <b>PRI</b>
			A group of segments to provide price/cost/value information.
PRI	- M	1	- Price details
			The segment is used to specify the price information for the current line item.
<b>SG14</b>	- C	10	- <b>RFF-DTM</b>
			A group of segments giving references only relating to the specified quantity.
RFF	- M	1	- Reference
			This segment is used to identify any references specific to the current line item. References specified here override those given at heading level for the current line only when the same qualifier is used.

## 4. Segments Description

---

- DTM - C 1 - Date/time/period  
This segment is used to specify dates and times associated with the previous RFF segment.
- SG15 - C 9999 - CPS-SG16**  
A group of segments providing details of all package levels item or quantity. This segment group provides the capability to give the hierarchical relationship. The group defines a logical top-down packaging structure.
- CPS - M 1 - Consignment packing sequence  
This segment is used to provide a detailed description of the packaging of the goods held in stock.
- SG16 - C 9999 - PAC-SG17**  
A group of segments specifying the number and type of packages, identification of the packages and date/time information.
- PAC - M 1 - Package  
This segment is used to identify the type of packaging used for the current line item.
- SG17 - C 9999 - PCI-DTM-GIN**  
A segment group specifying markings, labels and packing.
- PCI - M 1 - Package identification  
This segment is used to specify markings and labels which have been marked on the packaging of the current line item.
- DTM - C 5 - Date/time/period  
This segment is used to specify any dates and/or times marked on the package.
- GIN - C 9999 - Goods identity number  
This segment is used to provide identification numbers relevant to one or more shipping containers or packaging units.

### Inventory Report Summary Section

- UNT - M 1 - Message trailer  
The UNT segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

## 5. Segments Layout

---

This section describes each segment used in the EANCOM® Inventory report message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

### Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	<b>R</b>	Indicates that the entity is required and must be sent.
- ADVISED	<b>A</b>	Indicates that the entity is advised or recommended.
- DEPENDENT	<b>D</b>	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	<b>O</b>	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	<b>N</b>	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

## 5. Segments Layout

Segment number: 1

UNH - M 1 - Message header		EDIFACT	GS1	*	Description
Function: To head, identify and specify a message.					
Notes: 1. Data element S009/0057 is retained for upward compatibility. The use of S016 and/or S017 is encouraged in preference. 2. The combination of the values carried in data elements 0062 and S009 shall be used to identify uniquely the message within its group (if used) or if not used, within its interchange, for the purpose of acknowledgement.					
0062	Message reference number	M an..14	M		Senders unique message reference. Sequence number of the messages in the interchange. DE 0062 in the UNT will be identical. Sender generated.
S009	MESSAGE IDENTIFIER	M	M		
0065	Message type	M an..6	M	*	INVRPT = <b>Inventory report message</b>
0052	Message version number	M an..3	M	*	D = <b>Draft version/UN/EDIFACT Directory</b>
0054	Message release number	M an..3	M	*	01B = <b>Release 2001 - B</b>
0051	Controlling agency, coded	M an..3	M	*	UN = <b>UN/CEFACT</b>
0057	Association assigned code	C an..6	R	*	EAN007 = <b>GS1 version control number (GS1 Permanent Code)</b> Indicates that the message is the EANCOM version 007 of the UNSM Inventory Report.
0110	Code list directory version number	C an..6	O		This data element can be used to identify the codelist agreed by the interchange partners, e.g. EAN001 = EANCOM 2002 S4 codelist released on 01.12.2002 by GS1.
0113	Message type sub-function identification	C an..6	N		
0068	Common access reference	C an..35	N		
S010	STATUS OF THE TRANSFER	C	N		
0070	Sequence of transfers	M n..2			
0073	First and last transfer	C a1			
S016	MESSAGE SUBSET IDENTIFICATION	C	N		
0115	Message subset identification	M an..14			
0116	Message subset version number	C an..3			
0118	Message subset release number	C an..3			
0051	Controlling agency, coded	C an..3			
S017	MESSAGE IMPLEMENTATION GUIDELINE IDENTIFICATION	C	N		
0121	Message implementation guideline identification	M an..14			
0122	Message implementation guideline version number	C an..3			
0124	Message implementation	C an..3			

**5. Segments Layout**

---

Segment number: 1

	EDIFACT	GS1	*	Description
guideline release number				
0051 Controlling agency, coded	C an..3			
<b>S018 SCENARIO IDENTIFICATION</b>	<b>C</b>	<b>N</b>		
0127 Scenario identification	Man..14			
0128 Scenario version number	C an..3			
0130 Scenario release number	C an..3			
0051 Controlling agency, coded	C an..3			

**Segment Notes:**

This segment is used to head, identify and specify a message.  
 DE's 0065, 0052, 0054, and 0051: Indicate that the message is a UNSM Inventory Report based on the D.01B directory under the control of the United Nations.

Example:  
 UNH+ME000001+INVRPT:D:01B:UN:EAN007'

## 5. Segments Layout

Segment number: 2

BGM - M 1 - Beginning of message					
Function: To indicate the type and function of a message and to transmit the identifying number.					
		EDIFACT	GS1	*	Description
C002	DOCUMENT/MESSAGE NAME	C	R		
1001	Document name code	C an..3	R	*	35 = <b>Inventory report</b> 78 = <b>Inventory movement advice</b> 172 = <b>Authorisation to plan and suggest orders</b> 173 = <b>Authorisation to plan and ship orders</b> 263 = <b>Inventory adjustment status report</b> Code value 35 is used to report on the actual inventory held at the time the report is produced. Code value 78 is used to identify movements to and from inventory during the validity period defined.
1131	Code list identification code	C an..17	N		
3055	Code list responsible agency code	C an..3	N		
1000	Document name	C an..35	O		
C106	DOCUMENT/MESSAGE IDENTIFICATION	C	R		
1004	Document identifier	C an..35	R		Inventory Report number assigned by the document sender. For global unique identification of documents Global Document Type Identifier (GDTI) is available.
1056	Version identifier	C an..9	N		
1060	Revision identifier	C an..6	N		
1225	Message function code	C an..3	R	*	7 = <b>Duplicate</b> 9 = <b>Original</b> 31 = <b>Copy</b> The message function, coded is a critical data element in this segment. It applies to all data indicated in the message. The following definition apply for the restricted code: 7 = Duplicate - Re-transmission involving the same parties, on the specific request of the receiver. 9 = Original - An original transmission of an inventory report. 31 = Copy - A copy of an inventory report for a third party for information purposes.
4343	Response type code	C an..3	N		
Segment Notes: This segment is used to indicate the type and function of a message and to transmit the identifying number. All references other than the document number DE 1004 are to be put in the RFF segment.  Example: BGM+35+INVR21599+9'					

## 5. Segments Layout

Segment number: 3

DTM - M 10 - Date/time/period					
Function: To specify date, and/or time, or period.					
		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	M an..3	M	*	137 = Document/message date/time 194 = Start date/time 206 = End date/time 273 = Validity period 366 = Inventory report date
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 718 = CCYYMMDD-CCYYMMDD
Segment Notes:					
This segment is used to specify any dates relevant to the complete Inventory Report.					
DE 2005: Identification of the 'Document/message date/time' (code value 137) is mandatory in an EANCOM message.					
Example: DTM+137:20021101:102'					

## 5. Segments Layout

Segment number: 4

<b>SG1</b>	- C	10 - RFF-DTM			
<b>RFF</b>	- M	1 - Reference			
Function:					
To specify a reference.					
		EDIFACT	GS1	*	Description
C506	REFERENCE	M	M		
1153	Reference code qualifier	Man..3	M		AVD = <a href="#">Inventory report request number</a> CR = <a href="#">Customer reference number</a> CT = <a href="#">Contract number</a>
1154	Reference identifier	C an..70	R		
1156	Document line identifier	C an..6	N		
4000	Reference version identifier	C an..35	N		
1060	Revision identifier	C an..6	N		
Segment Notes:					
This segment is used to provide references for the entire message.					
All references should normally be given within this segment if they apply to the whole transaction.					
Example:					
RFF+CT:566241'					

## 5. Segments Layout

Segment number: 5

<b>SG1</b>	- C	10 - RFF-DTM			
<b>DTM</b>	- C	1 - Date/time/period			
Function:					
To specify date, and/or time, or period.					
		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	Man..3	M	*	171 = Reference date/time
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 718 = CCYYMMDD-CCYYMMDD
Segment Notes:					
This segment is used to specify dates or periods relating to the references given in the previous RFF segment.					
Example:					
DTM+171:20021001:102'					

## 5. Segments Layout

Segment number: 6

<b>SG2</b>	- C	20 - NAD-SG3-SG4			
<b>NAD</b>	- M	1 - Name and address			
Function:					
To specify the name/address and their related function, either by C082 only and/or unstructured by C058 or structured by C080 thru 3207.					
		EDIFACT	GS1	*	Description
3035	Party function code qualifier	M an..3	<b>M</b>		BY = Buyer CO = Corporate office GY = Inventory reporting party MF = Manufacturer of goods DEQ = Shipper SU = Supplier WH = Warehouse keeper GO = Goods owner PO = Ordering party
C082	PARTY IDENTIFICATION DETAILS	C	<b>A</b>		
3039	Party identifier	Man..35	<b>M</b>		For identification of parties it is recommended to use GLN - Format n13.
1131	Code list identification code	C an..17	<b>N</b>		
3055	Code list responsible agency code	C an..3	<b>R</b>	*	9 = <b>GS1</b>
C058	NAME AND ADDRESS	C	<b>O</b>		This composite may only be used to fulfill the requirements of directive 2003/58/EC, article 4.
3124	Name and address description	Man..35	<b>M</b>		
3124	Name and address description	C an..35	<b>O</b>		
3124	Name and address description	C an..35	<b>O</b>		
3124	Name and address description	C an..35	<b>O</b>		
3124	Name and address description	C an..35	<b>O</b>		
C080	PARTY NAME	C	<b>D</b>		
3036	Party name	Man..35	<b>M</b>		Party Name in clear text.
3036	Party name	C an..35	<b>O</b>		
3036	Party name	C an..35	<b>O</b>		
3036	Party name	C an..35	<b>O</b>		
3036	Party name	C an..35	<b>O</b>		
3045	Party name format code	C an..3	<b>O</b>		
C059	STREET	C	<b>D</b>		
3042	Street and number or post office box identifier	Man..35	<b>M</b>		Building Name/Number and Street
3042	Street and number or post office box identifier	C an..35	<b>O</b>		Name and/or P.O. Box
3042	Street and number or post office box identifier	C an..35	<b>O</b>		
3042	Street and number or post office box identifier	C an..35	<b>O</b>		
3164	City name	C an..35	<b>D</b>		City/Town, clear text.
	COUNTRY SUB-ENTITY				

## 5. Segments Layout

Segment number: 6

	EDIFACT	GS1	*	Description
C819 DETAILS	C	D		
3229 Country sub-entity name code	C an..9	O		
1131 Code list identification code	C an..17	O		
3055 Code list responsible agency code	C an..3	O		
3228 Country sub-entity name	C an..70	O		County/State, clear text.
3251 Postal identification code	C an..17	D		Postal Code
3207 Country name code	C an..3	D		ISO 3166 two alpha code

**Segment Notes:**

This segment is used to identify the trading partners involved in the Inventory Report message. Identification of the parties exchanging the message is mandatory in EANCOM.

If not all the goods are owned by the same party, the goods owner should be identified at the line item level and must not appear here.

**Example:**

NAD+MF+5412345000013::9'

NAD+BY+5412345000020::9'

**Dependency Notes:**

The following composites and data elements are only used when a coded name and address can not be used.

The affected composites and data elements are as follows:

C080 - C059 - 3164 - C819 - 3251 - 3207

## 5. Segments Layout

Segment number: 7

<b>SG2</b>	- C	20 - NAD-SG3-SG4			
<b>SG3</b>	- C	99 - RFF			
<b>RFF</b>	- M	1 - Reference			
Function:					
To specify a reference.					
		EDIFACT	GS1	*	Description
C506	REFERENCE	M	M		
1153	Reference code qualifier	Man..3	M		YC1 = Additional party identification (GS1 Temporary Code) FC = Fiscal number GN = Government reference number VA = VAT registration number
1154	Reference identifier	C an..70	R		
1156	Document line identifier	C an..6	N		
4000	Reference version identifier	C an..35	N		
1060	Revision identifier	C an..6	N		
Segment Notes:					
This segment is used to specify any references related to the party identified in the previous NAD segment.					
Example:					
RFF+VA:544211'					

## 5. Segments Layout

Segment number: 8

<b>SG2</b>	- C	20 - NAD-SG3-SG4		
<b>SG4</b>	- C	10 - CTA-COM		
<b>CTA</b>	- M	1 - Contact information		
Function:				
To identify a person or a department to whom communication should be directed.				
	EDIFACT	GS1	*	Description
3139	Contact function code	C an..3	<b>R</b>	IC = <a href="#">Information contact</a>
C056	DEPARTMENT OR EMPLOYEE DETAILS	C	<b>O</b>	
3413	Department or employee name code	C an..17	<b>O</b>	
3412	Department or employee name	C an..35	<b>O</b>	
Segment Notes:				
This segment is used to identify the contact name or department within the party specified in the NAD segment. The global location code is particularly suitable for this purpose.				
Example:				
CTA+IC+:M JOHNSON'				

## 5. Segments Layout

Segment number: 9

<b>SG2</b>	- C	20 - NAD-SG3-SG4		
<b>SG4</b>	- C	10 - CTA-COM		
<b>COM</b>	- C	5 - Communication contact		
Function:				
To identify a communication number of a department or a person to whom communication should be directed.				
	EDIFACT	GS1	*	Description
C076	COMMUNICATION CONTACT	M	M	
3148	Communication address identifier	Man..512	M	
3155	Communication address code qualifier	Man..3	M	EM = <a href="#">Electronic mail</a> TE = <a href="#">Telephone</a> AO = <a href="#">Uniform Resource Location (URL)</a>
Segment Notes:				
This segment identifies the communications number, and type of communications, for the person or department identified in the preceding CTA segment.				
Example:				
COM+00445221556:TE'				

## 5. Segments Layout

Segment number: 10

<b>SG5</b>	- C	5 - CUX-DTM			
<b>CUX</b>	- M	1 - Currencies			
Function:					
To specify currencies used in the transaction and relevant details for the rate of exchange.					
		EDIFACT	GS1	*	Description
C504	CURRENCY DETAILS	C	R		
6347	Currency usage code qualifier	Man..3	M	*	2 = Reference currency
6345	Currency identification code	C an..3	R		ISO 4217 3 alpha
6343	Currency type code qualifier	C an..3	R		10 = Pricing currency 11 = Payment currency
6348	Currency rate value	C n..4	N		
C504	CURRENCY DETAILS	C	D		The second occurrence of this composite is only used if a target currency is being specified.
6347	Currency usage code qualifier	Man..3	M	*	3 = Target currency
6345	Currency identification code	C an..3	R		ISO 4217 3 alpha
6343	Currency type code qualifier	C an..3	R		10 = Pricing currency 11 = Payment currency
6348	Currency rate value	C n..4	O		
5402	Currency exchange rate	C n..12	D		The rate of exchange which applies to the currency. This rate of exchange is only used if a target currency has been identified in the second occurrence of C504.
6341	Exchange rate currency market identifier	C an..3	N		
Segment Notes:					
<p>This segment is used to specify the currencies in which prices in the Inventory Report are quoted. The CUX segment is mandatory for international exchanges when valuing inventories. When specifying reference and target currencies for international trade, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of the composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402.</p> <p>The general rule for calculating the rate of exchange is as follows:          Reference Currency multiplied by Rate of Exchange = Target Currency.</p> <p>Example:          CUX+2:EUR:10'          CUX+2:EUR:10+3:USD:11+0.90243'</p>					

### 5. Segments Layout

Segment number: 11

<b>SG5</b>	- C	5 - CUX-DTM			
<b>DTM</b>	- C	1 - Date/time/period			
Function:					
To specify date, and/or time, or period.					
		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	M an..3	M	*	134 = Rate of exchange date/time 194 = Start date/time 206 = End date/time
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 718 = CCYYMMDD-CCYYMMDD
Segment Notes:					
This segment is used to specify any dates related to the previous CUX segment.					
Example:					
DTM+134:20021001:102'					

### 5. Segments Layout

Segment number: 12

<b>SG9</b> - C 9999999 - LIN-PIA-IMD-ALI-SG11					
<b>LIN</b> - M 1 - Line item					
Function: To identify a line item and configuration.					
		EDIFACT	GS1	*	Description
1082	Line item identifier	C an..6	R		Application generated number of the count of the item lines within the Inventory Report.
1229	Action request/notification description code	C an..3	N		
C212	ITEM NUMBER IDENTIFICATION	C	D		This composite is only used for the identification of GS1 codes. If another coding structure is required, e.g. HIBC, this composite will not be used and the code will be detailed in the PIA segment.
7140	Item identifier	C an..35	R		Format n..14 GTIN - this is the number of the article being reported.
7143	Item type identification code	C an..3	R	*	SRV = <b>GS1 Global Trade Item Number</b>
1131	Code list identification code	C an..17	N		
3055	Code list responsible agency code	C an..3	N		
C829	SUB-LINE INFORMATION	C	D		
5495	Sub-line indicator code	C an..3	R	*	1 = <b>Sub-line information</b>
1082	Line item identifier	C an..6	R		
1222	Configuration level number	C n..2	N		
7083	Configuration operation code	C an..3	N		
<p>Segment Notes:</p> <p>This segment is used to identify a specific line item in the inventory report.          If Global Trade Item Numbers are available it is mandatory to use GTIN within the LIN segment.          The detail section of the Inventory Report is formed by a repeating group of segments, always starting with the LIN segment.          In a simple Inventory Report covering one location, the LIN segment will contain the product identification with related stock quantities specified using only the INV, QTY and LOC segments in segment group 11.          In an extended Inventory Report covering multiple locations, an available option is to provide total stock quantities for all locations using the QTY and LOC segments in segment group 11, with the quantities per location further broken down using the full range of segments available in segment group 11.</p> <p>Example:          LIN+1++5412345111115:SRV'</p> <p>Dependency Notes:          C829 is only used when sub-lines are required.          FOR A COMPLETE DESCRIPTION ON THE USAGE OF SUB-LINES PLEASE REFER TO PART I, SECTION 4.10.</p>					

## 5. Segments Layout

Segment number: 13

<b>SG9</b>	- C	9999999 - LIN-PIA-IMD-ALI-SG11			
<b>PIA</b>	- C	10 - Additional product id			
Function:					
To specify additional or substitutional item identification codes.					
		EDIFACT	GS1	*	Description
4347	Product identifier code qualifier	M an..3	<b>M</b>	*	<p>1 = <b>Additional identification</b>            4 = <b>Substituted for</b>            5 = <b>Product identification</b></p> <p>Product Id function coded has the following restricted coded function:            1 = Additional Identification - To provide an additional identity for the product identified in the LIN segment. The additional identification can consist of :            A supplemental identification which provides more information complementary to the main GTIN provided in the LIN segment, e.g. a batch number, promotional variant number, product group number, etc.            An alternative identification which may be used instead of the main GTIN provided in the LIN segment, e.g. a buyer's article number, an HIBC code, etc.            4 = Substituted for - The given item number is the number of the original product substituted for another identified in the LIN segment.            5 - Product Identification - To provide the primary product identification code when no GTIN has been provided in the LIN segment.</p>
C212	ITEM NUMBER IDENTIFICATION	M	<b>M</b>		
7140	Item identifier	C an..35	<b>R</b>		
7143	Item type identification code	C an..3	<b>R</b>		<p>HS = <b>Harmonised system</b>            IN = <b>Buyer's item number</b>            PV = <b>Promotional variant number</b>            SA = <b>Supplier's article number</b>            SRV = <b>GS1 Global Trade Item Number</b></p>
1131	Code list identification code	C an..17	<b>O</b>		
3055	Code list responsible agency code	C an..3	<b>D</b>		<p>9 = <b>GS1</b>            91 = <b>Assigned by supplier or supplier's agent</b>            92 = <b>Assigned by buyer or buyer's agent</b></p>
C212	ITEM NUMBER IDENTIFICATION	C	<b>O</b>		
7140	Item identifier	C an..35	<b>R</b>		
7143	Item type identification code	C an..3	<b>R</b>		
1131	Code list identification code	C an..17	<b>O</b>		
3055	Code list responsible agency code	C an..3	<b>D</b>		
C212	ITEM NUMBER IDENTIFICATION	C	<b>O</b>		
7140	Item identifier	C an..35	<b>R</b>		
7143	Item type identification code	C an..3	<b>R</b>		

**5. Segments Layout**

Segment number: 13

	EDIFACT	GS1	*	Description
1131 Code list identification code	C an..17	O		
3055 Code list responsible agency code	C an..3	D		
C212 ITEM NUMBER IDENTIFICATION	C	O		
7140 Item identifier	C an..35	R		
7143 Item type identification code	C an..3	R		
1131 Code list identification code	C an..17	O		
3055 Code list responsible agency code	C an..3	D		
C212 ITEM NUMBER IDENTIFICATION	C	O		
7140 Item identifier	C an..35	R		
7143 Item type identification code	C an..3	R		
1131 Code list identification code	C an..17	O		
3055 Code list responsible agency code	C an..3	D		

**Segment Notes:**

This segment is used to specify additional item identification codes such as a buyer's or supplier's item number.

**Examples:**

PIA+1+ABC5343:IN'

In this example the PIA segment is used to provide an additional identification to the GTIN provided in the LIN segment. The GTIN 4000862141404 provided in the LIN segment refers to the internal buyer's item number ABC5343.

PIA+4+5412345123095:SRV'

In this example the PIA segment is used to provide the article number of the product which has been substituted by the former primary GS1 article number. The new GS1 5412345111184 would be included in the message in the LIN segment.

PIA+5+2209953C001L:AC'

This example details the HIBC code 2209953C001L which is provided as the primary product code because no GTIN was provided in the LIN segment.

### 5. Segments Layout

Segment number: 14

<b>SG9</b>	- C	9999999	- LIN-PIA-IMD-ALI-SG11		
<b>IMD</b>	- C	10	- Item description		
Function:					
To describe an item in either an industry or free format.					
		EDIFACT	GS1	*	Description
7077	Description format code	C an..3	O	*	C = Code (from industry code list) F = Free-form S = Structured (from industry code list) B = Code and text

C553	RELATED LOCATION TWO IDENTIFICATION	C	<b>O</b>	
3233	Second related location name code	C an..25	<b>R</b>	Global Location Number GLN - Format n13
1131	Code list identification code	C an..17	<b>O</b>	
3055	Code list responsible agency code	C an..3	<b>D</b>	9 = <b>GS1</b> DE 3055 must be used if DE 3233 is used and does not contain an UN/LOCODE.
3232	Second related location name	C an..70	<b>O</b>	
5479	Relation code	C an..3	<b>N</b>	
Segment Notes:				
This segment is used to identify the location of inventoried goods or the delivery location specific to the quantity reported in the QTY segment. When identifying locations it is recommended to use Global Location Number GLN.				
Example: LOC+18+5412345000013::9'				

### 5. Segments Layout

Segment number: 20

<b>SG9</b>	- C	9999999	- LIN-PIA-IMD-ALI-SG11
<b>SG11</b>	- C	9999	- INV-QTY-GIN-LOC-DTM-STS-SG12-SG13-SG14-SG15
<b>DTM</b>	- C	5	- Date/time/period

Function:

To specify date, and/or time, or period.

		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	M	M		
2005	Date or time or period function code qualifier	Man..3	M		36 = Expiry date 94 = Production/manufacture date 194 = Start date/time 206 = End date/time 273 = Validity period 360 = Sell by date 361 = Best before date 363 = Total shelf life period 366 = Inventory report date 96E = Stock cover period (GS1 Temporary Code) 750 = Before date 751 = After date
2380	Date or time or period value	C an..35	R		
2379	Date or time or period format code	C an..3	R		102 = CCYYMMDD 203 = CCYYMMDDHHMM

Segment Notes:

This segment is used to specify dates relevant to the quantity (or sub-quantity) specified in the QTY segment for the current line item.

In the extended Inventory Report this DTM segment may be used to indicate the inventory report date for the sub-quantity and location identified in the QTY and LOC segments respectively.

Example:

DTM+94:20020601:102'

## 5. Segments Layout

Segment number: 22

	EDIFACT	GS1	*	Description
3055 Code list responsible agency code	C an..3	O		
3228 Country sub-entity name	C an..70	O		County/State, clear text.
3251 Postal identification code	C an..17	D		Postal Code
3207 Country name code	C an..3	D		ISO 3166 two alpha code

**Segment Notes:**

To specify the name/address and their related function, either by CO82 only and/or structured by CO80 thru 3207. This segment is used to identify the goods owner related to the current line item in case that not all line items are owned by the same party. If identified here, no goods owner must appear at the header level as the NAD segment in SG 12 should not be used to override the NAD segment in SG 2.

**Example:**

NAD+GO+5412345000013::9'

**Dependency Notes:**

The following composites and data elements are only used when a coded name and address can not be used.

The affected composites and data elements are as follows:

C080 - C059 - 3164 - C819 - 3251 - 3207

## 5. Segments Layout

Segment number: 23

<b>SG9</b>	- C	9999999	- LIN-PIA-IMD-ALI-SG11		
<b>SG11</b>	- C	9999	- INV-QTY-GIN-LOC-DTM-STS-SG12-SG13-SG14-SG15		
<b>SG13</b>	- C	5	- PRI		
<b>PRI</b>	- M	1	- Price details		
Function:					
To specify price information.					
		EDIFACT	GS1	*	Description
C509	PRICE INFORMATION	C	R		
5125	Price code qualifier	Man..3	M		AAB = Calculation gross AAE = Information price, excluding allowances or charges, including taxes AAF = Information price, excluding allowances or charges and taxes
5118	Price amount	C n..15	R		
5375	Price type code	C an..3	O		CA = Catalogue CT = Contract
5387	Price specification code	C an..3	O		RTP = Retail price SRP = Suggested retail price
5284	Unit price basis value	C n..9	D		
6411	Measurement unit code	C an..3	D		
5213	Sub-line item price change operation code	C an..3	N		
Segment Notes:					
The segment is used to specify the price information for the current line item.					
Example: PRI+AAB:650:CA:RTP'					
Dependency Notes:					
Data elements 5284 and 6411 are used when a product is a variable quantity product, e.g. price per 200 kilos, or when the unit of measure for purchasing, delivery, and invoicing are different for a product, e.g. sugar is not a variable quantity product but ordered and delivered in packs, and invoiced in kilos or tonnes.

7402	Object identifier	M an..35	M		
7402	Object identifier	C an..35	O		
C208	IDENTITY NUMBER RANGE	C	O		
7402	Object identifier	M an..35	M		
7402	Object identifier	C an..35	O		
C208	IDENTITY NUMBER RANGE	C	O		
7402	Object identifier	M an..35	M		
7402	Object identifier	C an..35	O		

Segment Notes:

This segment is used to provide identification numbers relevant to one or more shipping containers or packaging units.

In EANCOM it is recommended to use the Serial Shipping Container Code for unique identification of individual transport packages (see page 2).

DE C208: If a sequential series of identity numbers is provided (e.g., from 1 up to and including 10) only one repetition of composite C208 is needed with the first repetition of 7402 specifying the smaller number (e.g., 1) and the second repetition the larger number (e.g., 10). If the identity numbers are not sequential and part of a series (e.g., 1, 3, and 10) then a separate C208 and DE 7402 must be used for each identity number.

Within internal applications users may provide a range of Serial Shipping Container Codes using one repetition of C208 (as described above) by transmitting a 17 digit SSCC and calculating the check digit within the application.

Example:

GIN+BJ+354123450000000106+354123450000000416'

This example identifies two serial shipping container codes 354123450000000106 and 354123450000000416.

## 5. Segments Layout

---

Segment number: 31

<b>UNT</b> - M 1 - Message trailer					
Function: To end and check the completeness of a message.					
Notes: 1. 0062, the value shall be identical to the value in 0062 in the corresponding UNH segment.					
		<b>EDIFACT</b>	<b>GS1</b>	<b>*</b>	<b>Description</b>

0062	Message reference number	M an..14	<b>M</b>		The message reference numbered detailed here should equal the one specified in the UNH segment.
Segment Notes: The UNT segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.					
Example: UNT+36+ME000001'					

6. Examples

**Example 1 -  
 Simple Inventory Report message (one stock reporting location)**

The following is an example of a simple Inventory Report message sent 1st March 2002 with reference number IVR21599. The message is sent from a stock location identified by GLN 5412345000013 to a head office identified by GLN 5410738100005.

The distribution centre informs the head office of stock levels as of 20th February 2002 for three different products. The stocks for two of the product stock quantities are sub-divided by best before date. The data in the following table is transmitted, except stock value.

GTIN	Actual Stock	Best Before Date	Gross Unit Price	Stock Value
5412345100102	55	2002/04/25	890	213,600
	185	2002/04/29		
5412345100560	12	2002/04/14	1450	162,400
	100	2002/04/19		
5412345100782	325	-	540	175,500

### Example 2 – Extended Inventory Report message (multiple locations)

The following is an example of an extended Inventory Report message sent 1<sup>st</sup> April 2002 with reference number INV0001. The message is sent from a buyer identified by GLN 5410738100005 to a manufacturer identified by GLN 5412345000013.

The buyer informs the manufacturer of inventory levels in three of his distribution centres for the product identified by GTIN 5412345123453, when the inventory count was taken. The three distribution centres are identified by GLNs and have the following actual stock counts:

5410738100012 – 42 Actual stock

5410738100029 – 153 Actual stock

5410738100036 – 98 Actual stock

**Example 3 –  
Simple Inventory Report message (one stock reporting location) reporting stock levels on products and identification numbers of shipping containers**

The following is an example of a simple Inventory Report message sent 1<sup>st</sup> February 2002 with reference number INVR21599. The message is sent from a distribution centre identified by GLN 5410738100050 to a head office identified by GLN 5410738100005.

The distribution centre informs the head office of the total stock levels for the products identified with the GTIN 5412345100102. The total stock for the product is divided into sub-quantities by shipping containers ready for despatch. Each shipping container is identified by an EAN.UCC Serial Shipping Container Code and information is given on the minimum durability date (best before date) for each shipping container. The data in the following table is transmitted.

GTIN	Total Stock	Sub-quantity	Serial Shipping Container Codes	Best Before Date
5412345100102	300	150	354123450000001011, 354123450000001028, 354123450000001035	2002/02/17
		100	354123450000004227 and 354123450000004296	2002/04/07
		50	354123450000006430	2002/05/24
